- MySQL
- PostgreSQL
- SQLite
- JSON File Management

Tools & Platforms

- Git / GitHub
- Postman API Testing
- Ngrok
- XAMPP & Laragon

Languages

- Arabic (Native)
- English (Fluent)
- German (Fluent)

TECHNICAL PROJECTS

Car Parts Tenders Platform - Neutral Marketplace

Technology: Flutter, Dart, Laravel, PHP Backend, Firebase, VPS

A neutral platform connecting customers and car-parts merchants through a tender system, with no financial liability on the platform. My role: built the complete admin dashboard from scratch (backend, database, and web panel with a custom green and navy UI); the mobile app UI was developed separately.

Key Features: Custom-built advanced admin panel with full control | Banners and role-based permissions system | Professional gradient-color UI | Fast performance with real-time Firebase notifications | Smart search engine | GDPR-compliant with a privacy policy for app store publishing

Our Family - Grocery E-Commerce Store

Technology: Flutter, Dart, Laravel, Bagisto, PHP Backend, Firebase, VPS

A mobile e-commerce app for selling groceries. My role: built the complete admin dashboard (backend, database, and web panel) on the Bagisto Laravel e-commerce framework; the mobile app UI was developed separately.

Key Features: Advanced admin panel with full control (Bagisto) | Banners, loyalty points, and order tracking system | Professional gradient-color UI | Fast performance with real-time Firebase notifications | Multi-purpose search engine | GDPR-compliant with a privacy policy for app store publishing | IBAN and PayPal payment methods

Bayah School - Educational Platform

Technology: HTML, CSS, JavaScript, Laravel, PHP, VPS Hosting

An educational website for a UAE school with quiz system and points tracking.

Key Features: Quiz system with student point tracking | Likes, comments, and confidential file upload | Video, podcast, and PDF upload | Accurate points calculation system | Leaderboard ranking students by activity

Turkish Box - Box Cost Calculator

Technology: HTML, CSS, JavaScript, GitHub

A website for calculating box costs based on dimensions.

Key Features: Responsive design for all devices | Instant and accurate calculations

Workers Wages App

Technology: Flutter, Dart, SharedPreferences

A lightweight application for managing multi-currency worker wages with attendance tracking.

Key Features: Multi-currency wage calculation | One-tap attendance tracking | Index feature for quick search | Persistent offline data storage (no internet required)

Al-Hal Market Accountant

Technology: Flutter, Dart, SharedPreferences, JSON, PDF

A comprehensive accounting application for a wholesale market.

Key Features: Compact mobile design displaying all elements on a single screen | Persistent offline storage (no internet required) | Index feature and PDF export

Shop Debts Manager

Technology: Flutter, Dart, SharedPreferences, JSON, PDF

A supermarket debt-tracking application replacing traditional ledgers.

Key Features: Budget calculation and analysis | PDF invoice generation in 2 seconds | Backup and data transfer capability | Index feature for quick search

Original Accounting App

Technology: Flutter, Dart, SharedPreferences, JSON, PDF

A desktop accounting application for goods trading.

Key Features: Permanent data storage for multiple devices | PDF export for invoices and details | Backup system | Full mouse-free operation for fast typing

Barbers Shop - Booking Platform (SaaS Concept)

Technology: Next.js, TypeScript, Supabase, Prisma, Auth

A booking platform concept for a barber or hair salon, with appointment scheduling and a foundation for customer and shop management. Designed around services, appointments, customers and business management.

Key Features: A public-facing landing page dedicated to each shop | Database-Level Isolation | Service & Staff Management | Shared Architecture

SaaS Clinic / DentaCare - Multi-Tenant SaaS

Technology: Next.js, TypeScript, PostgreSQL, Prisma, NextAuth, Stripe

A full-stack SaaS concept for managing multiple dental clinics with tenant isolation, role-based access, appointments, subscriptions and dashboards. It is designed to serve multiple dental clinics using a single codebase.

Key Features: Strict Server-Side Isolation | Smart Appointment Engine | Clinic Management & Billing Dashboard | Comprehensive Patient Experience
